Bologna: sensitivity of the MEVD 200-year level to analysis choices
a Data screening (median diff = +0.0 mm, max |diff| = 0.0 mm)
Record as provided
QC-screened record
b Window definition (median diff = +0.0 mm, max |diff| = 0.0 mm)
30 calendar years
30 consecutive valid years
c Threshold treatment (median diff = +28.7 mm, max |diff| = 37.5 mm)
Excesses over 1 mm (+1 mm)
Raw wet-day values (no subtraction)
d Weibull estimator (median diff = +26.1 mm, max |diff| = 40.0 mm)
